Bachelor Thesis from the year 2011 in the subject Engineering - Power Engineering, grade: "-", Atlantic International University, course: Petroleum Engineering - Phytoremediation, language: English, abstract: Abstract.

Phytoremediation is the use of plants and its associated microorganisms to achieve the conditions necessary to facilitate the breakdown of contaminants and clean-up of the polluted environment. Phytoremediation technology is viewed as the simplest way of handling variety of contaminants in many sectors of oil industry.

The community of microorganisms in the rhizosphere has been shown to be involved in degradation of numerous contaminants, including pesticides, polynuclear aromatic hydrocarbons, petroleum compounds, volatile organic chemicals, and in organics. Also, plants can degrade contaminants during plant metabolic activities; for instance, 2,4,6-trinitrotoluene has been shown to be degraded by plant enzymes. Plants can use contaminants as nutrients; nitrate contamination of ground water can serve as a nitrogen source for plants. This involves the achieving condition of ground water, waste oil and produced water from oil facilities. Phytoremediation is recommended because of its establishment at low -cost and with flexibility in wide aspect of soil environmental remediation. Practical field experiments and laboratory water quality test analysis carried out in an oil field in TharJath-south Sudan by using reed species called *Phragmites australis* has shown promising results.

It is common perennial grasses that thrive best in wetlands and temperate tropical part of the world. Southern part of the Sudan being temperate and tropical region is suitable for this reed species to thrive well. This Thesis provides a real analytical test and report on the effective clean up of the polluted environment by the use of reed plants through phytoremediation process. Hence will encourage future studies on remediation of the contaminated soil.

From reader reviews:

Luis Garcia:

Nowadays reading books be than want or need but also turn into a life style. This reading addiction give you lot of advantages. The advantages you got of course the knowledge your information inside the book that will improve your knowledge and information. The knowledge you get based on what kind of reserve you read, if you want get more knowledge just go with training books but if you want sense happy read one along with theme for entertaining for instance comic or novel. The actual Phytoremediation in reed plants treat and clean up polluted environment by petroleum produced water is kind of e-book which is giving the reader erratic experience.

Raymond Hollander:

In this age globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of recommendations to get information example: internet, paper, book, and soon. You will observe that now, a lot of publisher this print many kinds of book. The book that recommended for your requirements is Phytoremediation in reed plants treat and clean up polluted environment by petroleum produced water this publication consist a lot of the information on the condition of this world now. This specific book was represented just how can the world has grown up. The dialect styles that writer require to explain it is easy to understand. The actual writer made some exploration when he makes this book. That is why this book appropriate all of you.

Jason Allen:

In this particular era which is the greater individual or who has ability to do something more are more treasured than other. Do you want to become one of it? It is just simple way to have that. What you need to do is just spending your time not much but quite enough to get a look at some books. On the list of books in the top checklist in your reading list is actually Phytoremediation in reed plants treat and clean up polluted environment by petroleum produced water. This book that is certainly qualified as The Hungry Inclines can get you closer in getting precious person. By looking way up and review this book you can get many advantages.

Ana May:

What is your hobby? Have you heard which question when you got college students? We believe that that query was given by teacher for their students. Many kinds of hobby, Everybody has different hobby. And also you know that little person such as reading or as reading become their hobby. You need to understand that reading is very important in addition to book as to be the issue. Book is important thing to add you knowledge, except your current teacher or lecturer. You get good news or update about something by book. Amount types of books that can you choose to use be your object. One of them is this Phytoremediation in

reed plants treat and clean up polluted environment by petroleum produced water.
