Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging

Unraveling the functional properties of structural elements in the brain is one of the fundamental goals of neuroscientific research. In the cerebral cortex this is no mean feat, since cortical areas are defined microstructurally in post-mortem brains but functionally in living brains with electrophysiological or neuroimaging techniques – and cortical areas vary in their topographical properties across individual brains. Being able to map both microstructure and function in the same brains noninvasively in vivo would represent a huge leap forward. In recent years, high-field magnetic resonance imaging (MRI) technologies with spatial resolution below 0.5 mm have set the stage for this by detecting structural differences within the human cerebral cortex, beyond the Stria of Gennari. This provides the basis for an in vivo microanatomical brain map, with the enormous potential to make direct correlations between microstructure and function in living human brains.

This book starts with Brodmann's post-mortem map published in the early 20th century, moves on to the almost forgotten microstructural maps of von Economo and Koskinas and the Vogt-Vogt school, sheds some light on more recent approaches that aim at mapping cortical areas noninvasively in living human brains, and culminates with the concept of "in vivo Brodmann mapping" using high-field MRI, which was introduced in the early 21st century.

From reader reviews:

Jonathan Nelson:

What do you concerning book? It is not important to you? Or just adding material when you need something to explain what the one you have problem? How about your time? Or are you busy particular person? If you don't have spare time to complete others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? All people has many questions above. They have to answer that question mainly because just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is appropriate. Because start from on kindergarten until university need this specific Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging to read.

Gerard Brand:

Information is provisions for people to get better life, information nowadays can get by anyone with everywhere. The information can be a expertise or any news even restricted. What people must be consider if those information which is in the former life are challenging to be find than now could be taking seriously which one is acceptable to believe or which one the particular resource are convinced. If you obtain the unstable resource then you get it as your main information we will see huge disadvantage for you. All those possibilities will not happen inside you if you take Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging as the daily resource information.

Nancy Baumgardner:

This book untitled Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging to be one of several books that will best seller in this year, that's because when you read this guide you can get a lot of benefit upon it. You will easily to buy this kind of book in the book retail outlet or you can order it through online. The publisher in this book sells the e-book too. It makes you quicker to read this book, as you can read this book in your Touch screen phone. So there is no reason to your account to past this book from your list.

Sara Pacheco:

Guide is one of source of understanding. We can add our knowledge from it. Not only for students but additionally native or citizen have to have book to know the change information of year to be able to year. As we know those publications have many advantages. Beside all of us add our knowledge, also can bring us to around the world. From the book Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging we can acquire more advantage. Don't someone to be creative people? Being creative person must prefer to read a book. Just choose the best book that ideal with your aim. Don't be doubt to change your life at this book

Microstructural Parcellation of the Human Cerebral Cortex: From Brodmann's Post-Mortem Map to in Vivo Mapping with High-Field Magnetic Resonance Imaging. You can more attractive than now.
