Dipeptidyl Aminopeptidases: 575 (Advances in Experimental Medicine and Biology) Uwe Lendeckel, Dirk Reinhold, Ute Bank

Dipeptidyl Aminopeptidases exert a potent modulatory role at an interface between immune mechanisms, metabolic responses, and neuroendocrine pathways. Experimental models and clinical studies addressing the role of these enzymes and the effect of specific inhibitors pave the way to novel therapeutic concepts in immunology, rheumatology, oncology, reproductive medicine and diabetes. Leading experts in the field will contribute to this book, which will present a state-of-the-art view on these enzymes at a time when our understanding of their function is growing ever more rapidly and therapeutic options have become imminent. The sections of the book will focus on various topics including DP IV and related enzymes in: expression and function, metabolic disorders, immune mechanisms and immune disorders, neuronal diseases and cancer, and related drug development.
