Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics Samuel Karlin

Matrix Games, Programming, and Mathematical Economics deals with game theory, programming theory, and techniques of mathematical economics in a single systematic theory. The principles of game theory and programming are applied to simplified problems related to economic models, business decisions, and military tactics. The book explains the theory of matrix games and some of the tools used in the analysis of matrix games. The text describes optimal strategies for matrix games which have two basic properties, as well as the construction of optimal strategies. The book investigates the structure of sets of solutions of discrete matrix games, with emphasis on the class of games whose solutions are unique. The examples show the use of dominance concepts, symmetries, and probabilistic arguments that emphasize the principles of game theory. One example involves two opposing political parties in an election campaign, particularly, how they should distribute their advertising efforts for wider exposure. The text also investigates how to determine an optimal program from several choices that results with the maximum or minimum objective. The book also explores the analogs of the duality theorem, the equivalence of game problems to linear programming problems, and also the inter-industry nonlinear activity analysis model requiring special mathematical methods. The text will prove helpful for students in advanced mathematics and calculus. It can be appreciated by mathematicians, engineers, economists, military strategists, or statisticians who formulate decisions using mathematical analysis and linear programming.

From reader reviews:

John Tillery:

As people who live in the particular modest era should be upgrade about what going on or facts even knowledge to make these keep up with the era which can be always change and make progress. Some of you maybe can update themselves by looking at books. It is a good choice for you but the problems coming to a person is you don't know which one you should start with. This Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics is our recommendation to make you keep up with the world. Why, as this book serves what you want and want in this era.

Bobbi Brunner:

This Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics are reliable for you who want to become a successful person, why. The reason of this Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics can be among the great books you must have will be giving you more than just simple looking at food but feed anyone with information that probably will shock your prior knowledge. This book is usually handy, you can bring it all over the place and whenever your conditions throughout the e-book and printed ones. Beside that this Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics forcing you to have an enormous of experience for instance rich vocabulary, giving you demo of critical thinking that we know it useful in your day exercise. So , let's have it and luxuriate in reading.

Marcia Ogburn:

Are you kind of hectic person, only have 10 or even 15 minute in your day to upgrading your mind talent or thinking skill actually analytical thinking? Then you have problem with the book as compared to can satisfy your limited time to read it because all of this time you only find book that need more time to be go through. Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics can be your answer mainly because it can be read by a person who have those short spare time problems.

Marlene Tiggs:

A number of people said that they feel bored stiff when they reading a guide. They are directly felt this when they get a half regions of the book. You can choose the actual book Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics to make your personal reading is interesting. Your own skill of reading ability is developing when you just like reading. Try to choose simple book to make you enjoy to read it and mingle the feeling about book and looking at especially. It is to be initially opinion for you to like to open up a book and go through it. Beside

that the book *Mathematical Methods and Theory in Games, Programming, and Economics: Matrix Games, Programming, and Mathematical Economics* can to be your friend when you're truly feel alone and confuse using what must you're doing of that time.
