Le Nguyen Binh

Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics) Le Nguyen Binh

Carefully structured to provide practical knowledge on fundamental issues, **Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models** explores advanced modulation and transmission techniques of lightwave communication systems. With coverage ranging from fundamental to modern aspects, the text presents optical communication techniques and applications, employing single mode optical fibers as the transmission medium. With MATLAB and Simulink models that illustrate methods, it supplies a deeper understanding of future development of optical systems and networks.

The book begins with an overview of the development of optical fiber communications technology over the last three decades of the 20th century. It describes the optical transmitters for direct and external modulation technique and discusses the detection of optical signals under direct coherent and incoherent reception. The author also covers lumped Er:doped and distributed Raman optical amplifiers with extensive models for the amplification of signals and structuring the amplifiers on the Simulink platform. He outlines a design strategy for optically amplified transmission systems coupled with MATLAB Simulink models, including dispersion and attenuation budget methodology and simulation techniques. The book concludes with coverage of advanced modulation formats for long haul optical fiber transmission systems with accompanied Simulink models.

Although many books have been written on this topic over the last two decades, most of them present only the theory and practice of devices and subsystems of the optical fiber communications systems in the fields, but do not illustrate any computer models to represent the true practical aspects of engineering practice. This book fills the need for a text that emphasizes practical computing models that shed light on the behavior and dynamics of the devices.

Download and Read Free Online Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics) Le Nguyen Binh

From reader reviews:

Walter Berry:

Reading a guide can be one of a lot of pastime that everyone in the world likes. Do you like reading book consequently. There are a lot of reasons why people like it. First reading a e-book will give you a lot of new facts. When you read a guide you will get new information simply because book is one of a number of ways to share the information or maybe their idea. Second, studying a book will make you actually more imaginative. When you reading a book especially fiction book the author will bring that you imagine the story how the character types do it anything. Third, you could share your knowledge to other individuals. When you read this Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics), you could tells your family, friends as well as soon about yours guide. Your knowledge can inspire the others, make them reading a guide.

Charline Bynum:

Your reading 6th sense will not betray you, why because this Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics) reserve written by well-known writer who knows well how to make book that may be understand by anyone who also read the book. Written within good manner for you, dripping every ideas and publishing skill only for eliminate your own hunger then you still hesitation Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics) as good book not simply by the cover but also by content. This is one guide that can break don't determine book by its protect, so do you still needing yet another sixth sense to pick that!? Oh come on your studying sixth sense already said so why you have to listening to another sixth sense.

Candace Mathieu:

Is it anyone who having spare time in that case spend it whole day by simply watching television programs or just lying down on the bed? Do you need something totally new? This Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics) can be the reply, oh how comes? A book you know. You are thus out of date, spending your free time by reading in this completely new era is common not a nerd activity. So what these ebooks have than the others?

Janelle Ramirez:

On this era which is the greater individual or who has ability in doing something more are more valuable than other. Do you want to become one among it? It is just simple strategy to have that. What you must do is just spending your time not very much but quite enough to possess a look at some books. Among the books in the top list in your reading list is actually Optical Fiber Communications Systems: Theory and Practice with MATLAB® and Simulink® Models (Optics and Photonics). This book and that is qualified as The Hungry Hills can get you closer in growing to be precious person. By looking right up and review this book

you can get many advantages.
