Air pollution is recognized as one of the leading contributors to the global environmental burden of disease, even in countries with relatively low concentrations of air pollution. **Air Pollution: Health and Environmental Impacts** examines the effect of this complex problem on human health and the environment in different settings around the world. It not only covers general modeling, monitoring, and characterization techniques but also includes field studies and cases that offer valuable insight into region-specific issues.

With contributions from a distinguished group of international experts, the book explores ways of controlling air pollution and mitigating its adverse effects on human health and the environment. Often taking a regional and global perspective, it discusses the monitoring and source characterization of air pollution, the theory and application of air quality modeling, health effects and risk assessment, and the environmental impacts of air pollution. The book also addresses air quality management and relevant policy issues.

Along with providing an understanding of the scientific basis of air pollution, this volume helps readers better appreciate social and environmental determinants of public health and apply country-based research evidence to reduce health disparities and environmental inequalities.
