Intrinsically Motivated Learning in Natural and Artificial Systems

Intrinsically Motivated Learning in Natural and Artificial Systems

Intrinsically Motivated Learning in Natural and Artificial Systems

It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self-improvement. To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence, and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity, interest in novel stimuli or surprising events, and interest in learning new behaviours. The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish ?tness-enhancing goals. Intrinsic motivations continue during adulthood, and in humans they underlie lifelong learning, artistic creativity, and scientific discovery, while they are also the basis for processes that strongly affect human well-being, such as the sense of competence, self-determination, and self-esteem.

This book has two aims: to present the state of the art in research on intrinsically motivated learning, and to identify the related scientific and technological open challenges and most promising research directions. The book introduces the concept of intrinsic motivation in artificial systems, reviews the relevant literature, offers insights from the neural and behavioural sciences, and presents novel tools for research. The book is organized into six parts: the chapters in Part I give general overviews on the concept of intrinsic motivations, their function, and possible mechanisms for implementing them; Parts II, III, and IV focus on three classes of intrinsic motivation mechanisms, those based on predictors, on novelty, and on competence; Part V discusses mechanisms that are complementary to intrinsic motivations; and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations.

The contributing authors are among the pioneers carrying out fundamental work on this topic, drawn from related disciplines such as artificial intelligence, robotics, artificial life, evolution, machine learning, developmental psychology, cognitive science, and neuroscience. The book will be of value to graduate students and academic researchers in these domains, and to engineers engaged with the design of autonomous, adaptive robots.

From reader reviews:

Adrian Woodson:

Book is to be different for each grade. Book for children until adult are different content. As we know that book is very important for us. The book Intrinsically Motivated Learning in Natural and Artificial Systems was making you to know about other knowledge and of course you can take more information. It is quite advantages for you. The publication Intrinsically Motivated Learning in Natural and Artificial Systems is not only giving you much more new information but also to get your friend when you really feel bored. You can spend your current spend time to read your reserve. Try to make relationship with all the book Intrinsically Motivated Learning in Natural and Artificial Systems. You never sense lose out for everything should you read some books.

Michelle Mills:

Hey guys, do you wants to finds a new book to see? May be the book with the subject Intrinsically Motivated Learning in Natural and Artificial Systems suitable to you? The particular book was written by popular writer in this era. The book untitled Intrinsically Motivated Learning in Natural and Artificial Systemsis one of several books that will everyone read now. This specific book was inspired lots of people in the world. When you read this guide you will enter the new shape that you ever know just before. The author explained their thought in the simple way, consequently all of people can easily to comprehend the core of this reserve. This book will give you a great deal of information about this world now. In order to see the represented of the world on this book.

Ana Gaskill:

The reason? Because this Intrinsically Motivated Learning in Natural and Artificial Systems is an unordinary book that the inside of the publication waiting for you to snap the item but latter it will surprise you with the secret the idea inside. Reading this book next to it was fantastic author who else write the book in such awesome way makes the content inside of easier to understand, entertaining means but still convey the meaning fully. So , it is good for you because of not hesitating having this ever again or you going to regret it. This excellent book will give you a lot of advantages than the other book have got such as help improving your talent and your critical thinking approach. So , still want to hesitate having that book? If I had been you I will go to the guide store hurriedly.

Ronald Smith:

Don't be worry if you are afraid that this book may filled the space in your house, you can have it in e-book approach, more simple and reachable. This particular Intrinsically Motivated Learning in Natural and Artificial Systems can give you a lot of friends because by you checking out this one book you have thing that they don't and make an individual more like an interesting person. This particular book can be one of a step for you to get success. This reserve offer you information that maybe your friend doesn't realize, by knowing more than different make you to be great men and women. So , why hesitate? Let me have
